

Modem

Wifi - Router

Printer

• Explanations:

• ISP (Internet Service Provider):

Provides internet access to your home. Ex:- Jio, Airtel, BSNL

• Modem:

Converts the signal from the ISP into a digital signal your home devices can use. It connects directly to the ISP through a wired line (fiber optic/cable/DSL)

• Wifi Router:

Connect to the modem. It distributes internet to multiple devices either through Wi-Fi or LAN cables (wired).

• Devices Connected:

- Laptop (Via Wi-Fi or LAN Cable)
- Mobile Phones (Wi-Fi)
- Smart TV (Wi-Fi)
- Printer (Can be connected to the router wirelessly or wired to the laptop)

• Important Points:

- Router assign private IP address to each device inside the house using DHCP.
- All devices inside the home share one public IP address on the internet (using NAT)
- Wireless devices (like phones) and wired devices (like a laptop via LAN) coexist easily.
