

Requirements Gathering Brief

Community Connect" App

• Interview Summary

Acted as a business analyst speaking with a fictional client, Highland Neighborhood United, a nonprofit that organizes local community events.

The goal was to gather key requirements for a new app, Community Connect, designed to help residents discover, organize, and attend local events.

• Key Requirements Identified

→ User Accounts:

Residents can create personal profiles with basic information and interests.

→ Event Creation & Listings:

Users and organizations can post and manage events, including time, location and category.

→ Event Discovery:

Users can browse, search and filter events by location, date, or category (e.g., arts, sports, volunteer work).

→ RSVP & Check-In:

Ability to RSVP to events, receive reminders, and check in at events for attendance tracking.

→ Volunteer Opportunities:

Events can list volunteer roles and allow sign-ups directly through the app.

→ Notifications:

Personalized push notifications for upcoming events and new activities based on user preferences.

→ Calendar Sync:

Option to Sync events with Google Calendar, Outlook, or Apple Calendar.

→ Accessibility Features:

High-Contrast modes and other accessibility options, prioritized using a "Must-have, Should-have, Nice-to-have" model to guide minimum Viable Product (MVP) development.

→ Change Log:

Maintain a live document to track any changes or additions to requirements after the initial gathering.

• Summary

Clear, structured requirements gathering sets the foundation for a focused, user-centered app.

By using user stories, traceability matrices, and strong documentation, Community Connect can efficiently build while staying on track.
